Crocker MPR, West MPR, Roofing/HVAC and Marquee Signs

MPR Designs Are Underway!

We are happy to announce that Crocker's Site Committee will be reviewing three schematic designs presented by Quattrocci Kwok Architects! The next meeting will be held at the end of February and we are excited to hear their feedback.

After much thought and consideration, our West Site Committee team has narrowed it down to one design. Our architects, WRNS Studios are working on the Schematic Phase in which they will determine the areas, physical requirements and relationships of all the required building space and components.

Design

The Reports Are In!

Reports from the consultants are currently pending review and further discussion will be required with our Facilities and Construction team. In these reports, consultants review the existing conditions, and discuss their feedback and recommendations on the best way to proceed with the project. The photos

below depict the typical classroom closet. Currently, none of the classrooms have air conditioning at North and West. Bringing in new units will take some time and require approval from the Division of the State Architect (DSA), but we are working as quick as possible to get some cool air flowing through our classrooms.

Misc. Other Projects

West Underground Utility Lines, and New Marquee Signs

During the investigation and assessment of the West Underground Utility Lines, it was brought to our attention that the utility lines were in worse condition than expected. Over the 75 years of its lifetime, sections of the waste line have sunk, resulting in constant back ups and overall inefficiencies of the system. Architects and mechanical engineers are working diligently to figure out the logistics of the most feasible location to place these lines, while keeping the new MPR into consideration.

As for the marquee signs, we are currently in the Pre-Design/Architectural Program Development Phase. In this phase, the consultants will perform pre-design investigation to establish appropriate guidelines and identify design issues relating to functional needs, directive and constraints imposed by applicable regulatory codes. We are on track to have the marquees up by the end of summer!

Lastly, with the recent heavy wind and rain, we are aware of power outages within the surrounding areas. The Facilities and Construction team are reviewing options for the district to provide emergency power furring outages and are working on how to incorporate it into a future project.
